NOKERO SOLAR LIGHT BULB HAS MULTIPLE USES

Hong Kong, (June 10, 2010) — Like light itself, the Nokero N100 solar light bulb can be a very useful tool.

The Nokero N100 is specifically designed to provide light to the 1.6 billion who lack access to electricity, but it has other applications as well.

Recent events have shown that earthquakes, hurricanes, and other natural disasters can disable the traditional power grid and leave millions unexpectedly without electricity. Nokero can be used by government and non-governmental organizations to bring disaster relief in times of calamity, when light is often needed most.

Nokero can be used in the home as well. It can be hung on an outdoor patio, soaking up light during the day and providing soothing light in the evening.

It can also be used in classroom education, camping, in backyards, or in any of the hundreds of creative ways in which traditional lighting is currently employed.
