### **NOKERO SOLAR LIGHT BULB PROVIDES IDEAL SOLUTION TO 190 MILLION TON CARBON DIOXIDE PROBLEM**

- *190 million tons of carbon are released by fuel lanterns each year*
- *Clean, solar-powered Nokero light bulb is designed to alleviate global pollution*

#### **Interview opportunity: Inventor Steve Katsaros**

**Hong Kong**, (June 10, 2010) — Burning fossil-fuel lanterns for light is a human activity which puts an estimated 190 million tons of carbon dioxide into the air each year, the equivalent of 30 million cars ([Report to the United Nations Framework Convention on Climate Change](#)).

Kerosene lanterns are the most common light source for the 1.6 billion people who live without electricity worldwide. The Nokero N100 solar light bulb is designed to reduce kerosene use, improve lives, and remove undesirable pollution from the atmosphere.

Nokero's five LEDs (light-emitting diodes) shine bright, useful light powered by the sun, not kerosene. Its durable construction and replaceable, rechargeable, and recyclable nickel metal hydride battery make it ecologically friendly and yet ideal for distribution to impoverished areas of the world.

Many solar lighting systems require training, installation, or other infrastructure. Nokero is simple and easy to use. It is also durable, long-lasting, and small enough to carry. Nokero is built to withstand the difficult social and environmental conditions on the ground, so that it's practical and useful to the people who need it.

Nokero is partnering with individuals, groups, and Non Governmental Organizations (NGOs) to bring this affordable new lighting solution to those who rely on burning kerosene and other fossil fuels for light.

It is the first simple, easy to distribute, durable and effective solution to the problem of lamp-oil pollution worldwide.
