BREATHING CLEAN AIR: NOKERO SOLAR LIGHT BULB BRINGS A SAFE, HEALTHY LIGHT

- *Kerosene lamps are pollution and fire hazards*
- *Nokero solar light bulb is a healthier, safer lighting solution*

Hong Kong, (June 10, 2010) — The United Nations Framework Convention on Climate Change (UNFCCC) has found several adverse effects to the continued and widespread use of fuel lanterns ([The Lumina Project](#)). The Nokero N100 is designed to alleviate the dangerous and unhealthy conditions caused by fuel lanterns.

According to a recent study prepared for the UNFCCC, fuel-based lighting can have the following negative impacts ([The Lumina Project](#)):

- reduced productivity
- burn risks
- fire risks
- air pollution
- poor reading conditions
- reduced nighttime security.

The study also found that the use of LEDs, like the ones in the Nokero N100, can reverse or remove these impacts, making for a safer, cleaner world.

Nokero is a wireless technology – it doesn't require installation or the implementation of expensive infrastructure. It can solve the problems outlined by the UNFCCC and make for a healthier, safer world.
