

The Indonesian government provides Nokero lighting to thousands of residents

Nokero's Indonesian Government Partner has distributed 450,000 Solar Light Bulbs to residents.

Our customer: The government of Indonesia.

The Situation: Low rural electrification rates combined with challenging in-country logistics, make providing energy solutions to the Indonesian people difficult and expensive.

The Solution: Nokero's small, lightweight lights were the perfect solution for the Indonesian government. The lights were inexpensive to air-ship to distant islands and provided immediate lighting without the need for complex installations. Nokero solar lights are designed for the harshest environments and will provide years of reliable lighting for Indonesia.

The Results:

- 2.5 million lives impacted
- \$55,000,000 USD of economic impact, through kerosene savings
- 90,000 kWh of electricity generated per year from renewable energy source
- Over 64,000 metric tons of CO₂ prevented each year

"The Nokero team was excellent in responding quickly to our production schedule and delivery dates." - Representative, Indonesian Government
